

A collage of four images related to aircraft research: top-left shows an aircraft in a wind tunnel; top-right shows a supersonic aircraft in flight; bottom-left shows a jet engine; bottom-right shows a supersonic aircraft with a shockwave pattern.

# Research Actions on Noise Simulation for Sonic Boom

**Dr. Ludovic Wiart**  
Aerodynamic Research Engineer  
Expert in engine integration aerodynamics, ONERA  
**France**

- Introduction
- Past research actions on sonic boom at ONERA (academic)
- Ongoing institutional collaborations
  - DLR/ONERA/JAXA
  - NASA/ONERA
- European project RUMBLE
- Conclusions and Perspectives

- Sonic boom is identified as a key-issue for any future supersonic civil aircraft
  - Significant progresses achieved during last decade toward low-boom shapes
- A topic calling for international/global collaborations
  - A societal/global challenge
  - At pre-competitive stage
  - Regulatory aspects under discussion in ICAO CAEP/SSTG WG1
- Strong need for scientific data, knowledge and validated simulation methods for:
  - Sonic boom source prediction (near-field)
    - CFD methods, mesh dependency/adaptation, ...
  - Sonic boom propagation (far-field)
    - Atmosphere variability, turbulence, aircraft maneuver
  - Human response:
    - Psychoacoustic -> appropriate metrics
  - Other possible nuisances (building vibrations, ...)

## PhD ONERA/INRIA

Aerodynamics /sonic boom optimization (A. Minelli, 2010-2013):

- Advanced multicriteria optimization techniques : Nash Games, Multiple Gradient Descent Algorithm (J.A. Désidéri)

## Propagation code

Long term collaboration with F. Coulouvrat (UPMC) since 2000:

- French national projects (COS, DGAC)
- EU projects (HISAC, ATLLAS, ATLLASII)

## ONERA/JAXA

- Analysis of DSEND#1 experiments :

- QSST DESIGN by inverse design method

Parametrisation of JAXA SSBJ

## ONERA/STANFORD

Use of Stanford SU<sup>2</sup> code for sonic boom/aero optimizations

Application of ONERA sonic boom prediction tools on configuration Lockheed-Martin

## ONERA/AIAA

AIAA Sonic Boom Prediction Workshop:

- Participation to the first AIAA SBP workshop in collaboration with Dassault Aviation and INRIA
- Validation of CFD-based prediction capabilities

Adjoint based optimization of sonic boom (SU<sup>2</sup>)

Sonic boom evaluation of LMC0 configuration

## DLR/ONERA/JAXA collaboration (2016 +) :

### *Sonic-boom assessment for future supersonic en-route noise standard*

#### WP1. Low-boom design validation

Utilizing 2nd AIAA Sonic Boom Prediction Workshop

#### WP2. En-route noise assessment

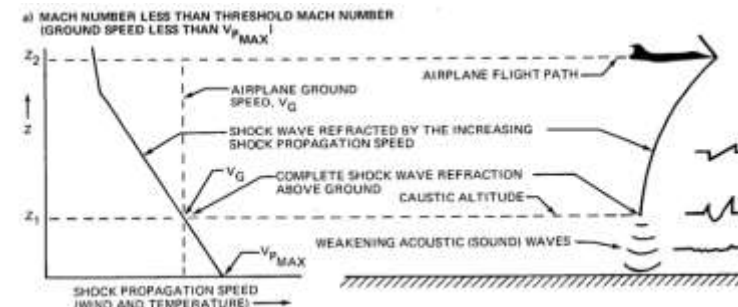

Looking into ICAO's sonic-boom standard development process

#### WP3. Robust low-boom design

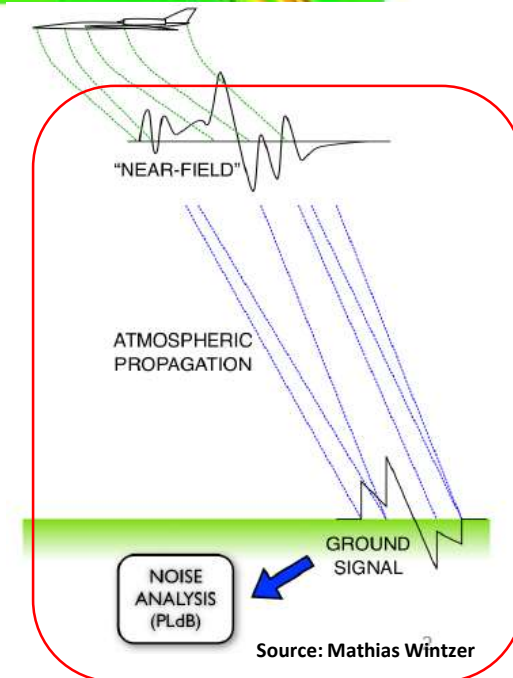

Contributing to the development of future supersonic en-route noise standard

## NASA/ONERA collaboration (2018 +)

- Motivations:
  - consolidate AIAA SBPW2 exercise through bilateral (more detailed) NASA-ONERA results comparisons
  - Possible contribution to the preparation of AIAA SBPW3
- Code to code verifications of sonic boom simulation tools:
  - Far-field propagation
  - Near-field to far field matching (multipole)
  - Sonic boom metrics

## RegUlation and norM for low sonic Boom LEvels

H2020 MG-1-2-2017 “Reducing Aviation Noise”

Europe – Russia cooperation

Duration: 36 months (Nov. 2017 – Oct. 2020)

Coordinator: Airbus Central Research & Technology – 13 European partners – 6 Russian partners

Purpose: Producing the scientific evidence requested by national, European and international regulation authorities to determine the acceptable level of overland sonic booms and the appropriate ways to comply with it.

Budget: 13 M€

Funded by the European Commission and the Russian Federation

With the participation of EASA and DGAC France

**Near field Aerodynamics - CFD**  
Mesh adaptation      Near-field CFD

**Mid-field - Aerodynamics / Acoustics**  
Pressure field extraction      Multipole matching

$$A_{\infty}(r, \infty) = \frac{1}{2\pi} \int_0^{\tau} \frac{A_{\infty}(\xi) d\xi}{\sqrt{r - \xi}}$$

**Far-field - Acoustics - Non linear propagation**

Validation of sonic boom simulation tools  
(far field : Airbus code BANGV)

Human response and metrics

Low-boom design

Wind tunnel test  
(ONERA S2MA)

Ground Measurements  
(TsAGI flight tests)

- Sonic boom topic calling for international collaborations :
  - Societal challenge
  - Regulatory aspects (ICAO CAEP/SSTG WG1 activities)

- In Europe, the ongoing RUMBLE project is part of a more general roadmap

- Work Programme 2020 « MG-3-05-2020: Towards a high-speed global air transportation demonstration”
  - Int’l Cooperation explicitly encouraged

- Opportunities for IFAR actions :

- IFAR "Noise Working Group" (leader: ONERA) to be soon extended to noise concerns by SST & UAM vehicles

**2020 opportunity & Previous examples**
**Faster Aviation**

**MG-3-05 -2020**

Multilateral International Cooperation encouraged, in particular

**Russia**  
+ tbc  
**Japan**  
**USA**  
...

**Towards a high-speed global air transportation demonstration**

- Challenge:
- Scope:
- Expected impact:
- Estimated EC contribution

To be defined end of 2018

Previous examples:

**Horizon 2020 RUMBLE: Regulation & norm for low sonic boom**

Dec, 2017 – 2020. 5 M€ EU funding.  
Coordinator: AIRBUS + 18 participants from France, UK, Germany, Belgium, Norway, Spain and Russia.

- Models/tools to predict boom generation/ propagation
- Quantitative information on the human response
- Flight procedures and instrumentation for low boom impact
- Recommendations for flying demonstrator & standards

Other projects were on higher-speed (civil hyper-sonics):

- coordinated by the European Space Agency: HEXAFly-INT
- coordinated by Airbus Group Innovation (with Japan) : HIKARI

Thank you for your attention!

# 2018 ICAS—IFAR Award Ceremony

Presented By  
**Susan Ying** (ICAS President)  
**Michel Peters** (NLR)

To  
**Dr. Rei Yamashita** (The University of Cambridge)

- ➔ A global award to honor an individual who has made a significant contribution to Aeronautical Science within his/her doctoral thesis (Ph.D. or equivalent)
- ➔ Eligibility:
  - Within 2 years of the date after the PhD was obtained
  - Under 40 years old at nomination date
- ➔ The Award Winner is selected by IFAR Evaluation Team & ICAS Honors & Awards Committee out of candidates nominated by IFAR member organizations worldwide
- ➔ Launched in 2016

# ***Dr. Rei Yamashita***

***The University of Cambridge***

***Japan Society for the Promotion of Science (JSPS) Overseas  
Research Fellow***

***Doctoral thesis: “Full Field Simulation for Sonic Boom  
Propagation through Real Atmosphere”***

***31<sup>st</sup> Congress of the International Council of the Aeronautical Sciences***

***Belo Horizonte, Brazil***
