The first 100 years of powered flight started in Dayton, Ohio
...so will the next.

International Air & Space
Symposium and Exposition

The Next 100 Years

The Premier Global Event for the Centennial of Flight
14–17 July 2003 • Dayton Convention Center • Dayton, Ohio USA

After four years of painstaking research from their Dayton bicycle shop, the Wright Brothers sent humanity soaring into the future above the sand dunes of Kill Devil Hills. Now, after a century of stunning achievements in aviation and space, the world once again turns to Dayton. Over four exciting days, the international aerospace community will come together to honor the pioneering spirit of our industry, and lay the groundwork for a new century of discovery that will change our world—and expand our access to the universe.

Message from the President of the International Council of the Aeronautical Sciences

Canada hosted the 10th ICAS Congress in Ottawa in 1976 and it was with great pleasure that the International Council of the Aeronautical Sciences accepted the invitation of CASI to come again to Canada to hold its 23rd Congress in Toronto in September 2002.

At the inaugural meeting of ICAS in 1957, the vision set out by Theodore von Karman and the Founding Fathers was that the ICAS Congress should provide aeronautical scientists and engineers from all over the world with a forum in which they could meet to learn about new discoveries in aeronautical science, technology and products, exchange ideas and experiences and develop a friendly professional network free from cultural, political and ideological constraints. ICAS has served that vision well and over the years has increasingly established itself as the foremost international forum for aeronautical science and engineering. Today, special attention is being given to students and young engineers and scientists and the opportunity that the ICAS Congress provides for them to meet with colleagues from all over the world. We also must prepare for the increasingly global nature of our industry and the increasingly international nature of all aspects of aeronautical products, from research through development, production, operations, training and maintenance.

The global changes in the structure of the industry along with new priorities in R&T topic areas such as information technology, electronics, microsystems and system of systems solutions are challenges for our established scientific and engineering community. The ICAS Executive Committee and the Programme Committee are seriously watching these changes and are adjusting to today's and future requirements to support a healthy collaboration between academia, research and industry.

The Call for Papers for the 23rd Congress –for the first time web-based– attracted over 570 submissions from 32 countries. From these, the ICAS Programme Committee, chaired by Billy Fredriksson of Sweden, had the difficult task of selecting about 350 papers for presentation. The calibre of the authors and the quality of their submissions was well up to the high standards set by previous ICAS Congresses and, as is evident from the programme set out in the following pages, ICAS 2002 promises to be a highly stimulating and rewarding event.

The City of Toronto will provide a most attractive venue for the Congress and, on behalf of ICAS, I must thank the Canadian Aeronautics and Space Institute for undertaking the substantial organisational task that is entailed in hosting this event. I am personally delighted that CASI proposed Toronto for 2002. Let me extend my grateful thanks to all authors who are sharing their work and ideas with us as well as to all session chairs who are bringing in their expertise. I have no doubt that, for everyone who participates in the Congress, it will be a meeting to remember.

Wolfgang Schmidt, President of ICAS

Message from the President of CASI

It is my great pleasure to invite you to the 23rd Congress of the International Council of the Aeronautical Sciences in beautiful Toronto, Canada.

The industry worldwide has never faced a more daunting challenge than it does now as we struggle with major challenges on a wide variety of fronts, from trade to terrorism. As much as it has been deeply affected by recent economic and political events, the aerospace sector remains a potent force for growth and advancement. This 23rd Congress affords us all the opportunity to regroup and move forward.

Canada, with its vast open spaces, its deep roots in aviation, and its leading-edge capabilities in aerospace is a country well-suited to host the 2002 Congress. Toronto is the commercial capital of the country -- a bright, modern, multicultural city renowned for its warm hospitality and its cosmopolitan atmosphere. Delegates will enjoy a wide variety of technical tours and sightseeing opportunities. For accompanying persons, Toronto is a wonderful city to explore with a marvellous mix of museums, art galleries, historical and cultural points of interest, and shopping to rival any major city in the world. Just as important, Toronto has a well-deserved reputation as one of the safest, cleanest cities in North America.

We are looking forward to welcoming you to the 23rd ICAS Congress in Toronto, Canada.

Fassi Kafyeke, President of the Canadian Aeronautics and Space Institute

THE INTERNATIONAL COUNCIL OF THE AERONAUTICAL SCIENCES (ICAS)

The International Council of the Aeronautical Sciences (ICAS) is a non-government, non-profit making, scientific organization which was established in 1957 to encourage the free interchange of information on aeronautical subjects. The recognized National Associations of the World dedicated to the advancement of the science and engineering of aviation and space are eligible for membership of ICAS and full participation in its activities. ICAS today numbers 32 societies from as many countries. In addition, it is supported by aerospace companies, scientific and technical institutions acting as associates. The objective of ICAS is to organize on this international basis a worldwide forum for the discussion and international interchange of aeronautical problems and subjects, and promote international co-operation in the study of such problems in aeronautical science and technology where there is a common interest. ICAS holds an International Congress in the fields of Aeronautical Sciences on a biennal basis. The venue is chosen by the General Assembly and changes from Congress to Congress.
